

I am oposed to BPL since it will interfere with HAM Radio operations, CB for truckers , Cordless Phones, AM Radio Reception, Local police and fire, HD TV, and FEMA's operation to assist public response during emergencies. None of the afore mentioned should be sacrificed just so corporate America can get a PC in every home. Japan, Austria, and Netherlands tried it and then cancelled its operation as being counter productive. Why can't we learn from the experiences of these other countries? BPL is a big, dumb mistake and if implicated it will take freedom away from its citizens and enhance otherwise deprived peoples of very little from accessing a pc excepting what to shop for from the blatant and repulsive ADS already on line. This is not progress it is greed and a sure sign of the government on the way to enforcing a police state where Big Brother tracks every thing you do, view, etc. How can the FCC endorse such a program? FEMA would become useless. Does not the FCC care about the public safety or have they been bought and sold by corporate America?
